

# PiperNet Is Here

## The Problem

Beneath the flashy homepages of your favorite sites lurk Hooli™ and other evil corporations out to hoard and sell your most personal data.

What was built to be the ultimate platform for the free sharing of knowledge has turned into a money-hungry monster feasting on our privacy and freedom.

But fear not, for Pied Piper has the answer! And it's simple:  
An autonomous peer-to-peer network featuring distributed storage powered by universal compression, accelerated scheduling allocation, and end-to-end encryption.

Put even simpler — **it's the internet, completely decentralized.**

*We're in this together! All of our computers and phones join in a network to make the strongest supercomputer the world has ever seen.*

## Introducing PiedPiperCoin

Pied Piper's new internet is built *for users, by users*.  
You supply the storage, compute, and networking resources that power our entire decentralized web.

Now there's a way to give credit where credit is due. Compute credit, that is! The more you share your device resources, the more PiedPiperCoin you receive.

Whether you're a developer with an app ready for market, or just an Average Joe with a smartphone you'll love all you can do with PiedPiperCoin.

## The Team

**Richard Hendricks**  
*Founder & CEO*

**Dinesh Chugtai**  
*Senior Programmer*

**Bertram Gilfoyle**  
*Chief Systems Architect*

**Jared Dunn**  
*Chief Operating Officer*

**Monica Hall**  
*Chief Financial Officer*

**Nelson Bighetti**  
*Majority Investor*
